

INVESTIGATION REPORT – LPS Team

Investigation Site	Epping Forest
Investigation Date	18 th August 2007
Report By	Andy Fazekas
Team Members	Andy, Stephanie, Bill

Vigil 1: 21:45

22:00 saw a glimpse of a light moving across my vision from right to left. The light appeared to be about 9 to 10 feet off the ground about level with the middle of the trees and approx 40 or 50 feet away (though my judge of distance is not the best). The light appeared as white and orb shaped and I only caught a glimpse of this.

I used the temperature gauge which showed temperatures of 57°F to 58°F in the area where I was standing.

Vigil 2

While standing with Bill and Steph my mobile which was inside my inside jacket pocket started to vibrate and come on. This was unusual because it was switched off at the time and it is not set to vibrate as proven earlier by a call that came through. Having checked the phone it was turned off and placed back in my pocket. A few minutes later the same thing happened and further more the key pad would not work properly.

The sound recorder did not record anything of note except rain.

Photographs only show rain orbs.

Post- Investigation

Mobile phone did not work the next day either and is now broken.

Possible suggestions for the light

- I saw was another team in the area although this was checked and none were there.
- Low flying plane seen through the trees or other type of light source however there was no accompanying sound heard.

A good investigation and I feel that this area warrants further investigation in 2008 by LPS.
