Investigation Site	Woburn
Investigation Date	20 th March 2026
Report By	Andy
Team Members	Andy, Ben, Paula, Karl, Jane, Robin, Jim, Lorraine

Historical Information

The bomber was a Bristol Blenheim bomber. The date of the crash was the 9th September 1941 which explain why it was not a Lancaster as the RAF had none back then. Might be nice to do a return visit on this date.

RW hunting camera fell. This camera was fixed by a tripod on top of a bin/food feeder a little way from the group. The camera was facing the poppy post. Also, on top of the bin/food feeder was a cat ball.

The cat ball did not go off, and there were no pictures taken with the camera. But on the record and at the time, you can hear the thuds. The first one is unknown, but the movement was seen by Jane before and was believe it could be an animal, and the second one is the camera hitting the floor. The second thing the tripod legs were moved from their positions in an unusual way. Placed the camera back on the bin/food feed and checked that it was all working. The camera was knocked off, and the arms were bent out of shape.
